

	Write a program in python to accept student details and marks , calculate the
1	percentage and check if the student is eligible for the admission.
2	Write a menu-driven program in python to implement Calculator
	Write a menu driven program in python to print Factorial, multiplication table and
3	Fibonacci series
	Write a program in python to accept the stock (in kg) and price (of per kg in rupees)
	of fruits available in fruit market using dictionary and then calculate the total value (in
4	rupees) of fruit market
	Write a program in python to accept the continuous assessment of the student
_	according to different rubrics defined for Term Work calculation, calculate the final TW
5	marks and display the grade of the student
6	Write a python program to search an element in 1D Array.
	Write a python program to accept two matrices and find their tanspose, addition and
7	product,
	Write a python program to create a bank class where deposits and withdrawal can be
8	handled by using instance methods.
	Python program to print area and perimeter of various geometry by inheriting
9	polygon class.
	Write a python program to perform exception handling using try, except, finally, else,
10	assert and raise
	Write a python program to perform basic operations on file and also perform pickle
11	and unpickle operations in it.
	Write a python program to achieve thread synchronization using locks when multiple
12	passengers are booking the ticket simultaneously.
	Write a python program to perform basic select, insert, update, delete queries on
13	database using python program.
14	Write a python program to display scenery drawing in the canvas.
	Python program to create simple registration form using different widgets and also
	insert,delete,modify the data in MySQL Database table
15	by using the registration form
16	Menu driven python program to display various plots using matplotlib.
	Python program to import some dataset using pandas and performing the operations
17	like sorting function, index operations, merging, missing values management etc.
18	Python program to calculate inverse and determinant of 3X3 matrix
19	Installation and develop a basic application on Flask.
20	WAP to display the sum of two complex numbers
21	WAP python Program to create bytearray type array and retrieve elements
22	WAP to create list using range function
23	WAP to accept elements in form of tuple and display their sum and average

WAP to create dictionary with employee details and retrieve the values upon giving
them keys
Write python programs to develop Fibonacci series, Multiplication table and Pascals
triangle.
WAP to that generates prime number with the help of function to test prime or not
WAP to understand global and local variables
WAP to demonstrate positional arguments and key word arguments
WAP to store students marks into an array and find total marks and percentage of
marks
WAP for 3 * 3 matrix addition and multiplication ( use Numpy)
Implement a system for exam department that accept student details along with
marks and display the Grade obtained by the student
WAP to create a static method that calculate number of instances of class
A program where 2 thread acts on same method to allot a berth for passenger
Write python program to pickle Employee Class Objects
Write a Python program to create arcs in different shapes
Create 2 Entry wizard to accept 2 number and 4 button for + ,-,* and /, when user
check any of these button the result must be doisplayed on frame
Write python program to show scatter plot of runs scored by Mumbai Indian Team in
last year IPL final
Write a program to perform any 5 operations on DataFrame
Write a python program to implement Byte Array, Range, Set and STRING Functions
Find out which data structure is better to store student registration details. ( List,
Tuple, Set,Dictionary, Array)
Implement a system for exam department that accept student details along with
marks and display the Grade obtained by the student.
